

**All Genesis Cables are UL- or ETL-listed.** Cable listing marks show that products have been tested to industry-specific fire and safety standards by unbiased third-party organizations. Choosing listed cable will protect your cable investment - preventing rip outs, reinstallations and fire hazards.

## Reputable Testing Partners

The two most recognized testing entities are UL and ETL. Both are certified as Nationally Recognized Testing Laboratories (NRTL), giving them the authority to test and certify products to widely accepted safety requirements.

**Though different organizations, UL and ETL test to the same standards for any given listing** and a listing from either organization has identical meaning.

**Manufacturers have the freedom to choose their NRTL**, including a testing entity besides UL or ETL.

## The Mark of Quality

Listed cables can be identified by the listing mark and unique file number placed on the product and its packaging. This mark is most often found on the front of boxes, circular flange or label of reels, and the file number is printed on the cable's jacket.

**Unmarked products shouldn't be trusted and are a threat to device and personal safety.**
