

Metal Clad® Cable Connectors & Terminations

-GENESIS-

Metal connectors play a critical role in the performance and NEC compliance of metal clad cable. Plastic connectors are not NEC compliant and must not be used with metal clad cable.

Know the Code

National Electrical Code Article 330 states that “fittings used for connecting Type MC cable to boxes, cabinets or other equipment shall be listed and identified for such use.” † Appropriate connectors are identified on the packaging or fitting itself with “MCI-A” or “Metal-Clad Interlocking Armored Ground Cable Type” markings.

† National Electric Code, www.nfpa.org

Metal Connectors

Ensures cable grounding.
Minimize interference.
NEC approved.

Plastic Connectors

Prevent cable grounding.
Invite interference.
Violate NEC Article 330.
