Installation Guidelines for **SIMpull®** Cable-In-Conduit

WARNING: Cable must be cut free from conduit and reel at both ends or severe damage may occur to product.

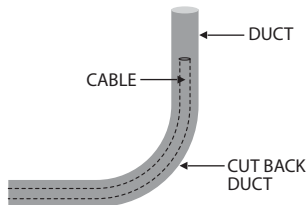

CAUTION!

If using a pulling eye with an internal tie-off, do not tie off the end of the cable to the pulling eye.

CAUTION!

The CIC reeled product will have more duct than cable when pulled from the reel. It is desirable and normal for the cable to retreat into the duct as the duct is paid off the reel. It is normal for approximately 1.5% of the cable to retreat into the duct during payoff. This same amount of duct should be left above ground after installation.

Southwire has made an allowance for the excess duct at no additional charge – actual reel length is based on the cable or conductor. Upon completion of the CIC installation, cut off the excess duct and dispose of properly.

If you have questions regarding the installation of this product or wish to receive a complete copy of the CIC Installation Guide, contact Customer Service at the number listed above.
