

## ABOUT

### CUSTOMER

VECA Electrical & Technologies  
Seattle Children's Hospital

### PRODUCT

Feeder Wire

### LOCATION

Seattle, WA

The Seattle Children's Hospital Building Care Project is a 330,000 square foot addition to the existing Seattle Children's campus. The project includes the construction of 8 stories of hospital program space and a 2 story mechanical penthouse above grade, as well as a three story parking structure below grade. The building's electrical distribution system is substantial. The building is served by (2) 4000A services from Seattle City Light, and by (2) 2 megawatt generators for emergency power. There was no busway used in this building, so all power distribution was accomplished utilizing pipe and wire. This is can be a difficult job for any contractor, but Southwire's SIMpull Solutions® Innovations can help make a complicated job SIMpull.

## SOLUTIONS USED

- 4 conductor 600v SIMpull XHHW™ Copper Wire & Cable Color Phase Conductors
- Configurator Plus™ Web App
- SIMpull™ Reels
- SIMpull Head® Pulling Heads
- Maxis® XD10 EXTREME Duty Cable Puller
- Contractor Solutions Team

## JOBSITE NUMBERS

**8**  
STORIES

**4,000**  
LB. SIMpull™ REEL  
\*Paralleled wire included in weight

**2**  
PEOPLE  
needed to move the reel

## IMPROVING INSTALLATION

**WORK SMARTER**  
on the jobsite

**SAVE TIME**  
on redeploying on to next tasks

**BE MORE EFFICIENT**  
with faster installs

Wire pulled with Maxis® XD10 EXTREME Duty Cable Puller by 2 people.

## DON'T JUST TAKE OUR WORD FOR IT

“

*The configurator made ordering and tracking the wire extremely easy, and because as many as eight runs were sometimes wound on one reel, we never had a bunch of individual reels cluttering up the jobsite*

”

Tobin Foulke  
General Foreman

“

*With the SIMpull™ Reels our crew simply rolled the reel into position, connected the crimp-on heads to the rope, and one of them went to run the tugger while the other monitored the feed end. **Done.** No back sprains, no crushed fingers, minimal labor.*

”
